

Transverse-field Ising chain, N = 80, g = 1.0. Real RBM with 16 to 16384 hidden units, float64. 4096 uniformly random samples.
Eigendecomposition pseudo-inverse with diagonal shift 0.001 in all series. Same update in all series up to 1e-13 (relative).
Only the batched Jacobian and the NTK on the fly use batches: 1024 samples (Jacobian) and network evaluations (local energies). Median of 3 MinSR steps after compilation and 1 warm-up steps, sampling excluded.
One process per point. GPU: NVIDIA GH200 120GB. jVMC_exp 1.5.8 | jax 0.11.2 | netket 3.22.4
