

Transverse-field Ising chain, N = 80, g = 1.0. Real RBM, 80 hidden units, 6400 parameters, float64. Uniformly random samples.
Eigendecomposition pseudo-inverse with diagonal shift 0.001 in both. Same update in both libraries up to 1e-11 (relative).
Batches of 16384 network evaluations (local energies) and samples (Jacobian). Median of 3 SR steps after compilation and 1 warm-up steps, sampling excluded.
One process per point. CPU: cpu. jVMC_exp 1.5.8 | jax 0.10.2 | netket 3.22.4
