
Transverse-field Ising chain, N = 80, g = 1.0. Complex RBM, 80 hidden units, 12800 real parameters, complex128. 4096 samples, 1024 chains, sweeps of 80 spin flips, 20 thermalization sweeps.
At most 4096 network evaluations per call. Evaluation = full estimate of <H> minus matrix elements. Total = sampling + full estimate of <H>. (r x): NetKet time / jVMC_exp time.
Median of 10 repetitions after compilation and 2 warm-up runs, error bars: interquartile range. 1 x GPU: NVIDIA GH200 120GB. jVMC_exp 1.5.8 | netket 3.22.4 | jax 0.11.2
