

Transverse-field Ising chain, N = 80, g = 1.0. Real RBM with 16 to 512 hidden units, float64. 4096 uniformly random samples.
Eigendecomposition pseudo-inverse with diagonal shift 0.001 in all series. Same update in all series up to 1e-13 (relative).
Batches of 1024 network evaluations (local energies) and samples (Jacobian). Median of 3 MinSR steps after compilation and 1 warm-up steps, sampling excluded.
One process per point. CPU: cpu. jVMC_exp 1.5.8 | jax 0.10.2 | netket 3.22.4
